Lab10 - Prometheus

Adding prometheus and grafana to docker-compose

1. Clone the following repository :

git clone https://github.com/brahimhamdi/dockercoins-monitoring

```
brahim@Training:/tmp$ git clone https://github.com/brahimhamdi/dockercoins-monitoring
Clonage dans 'dockercoins-monitoring'...
remote: Enumerating objects: 38, done.
remote: Counting objects: 100% (38/38), done.
remote: Compressing objects: 100% (32/32), done.
remote: Total 38 (delta 10), reused 34 (delta 6), pack-reused 0
Réception d'objets: 100% (38/38), 145.51 Kio | 380.00 Kio/s, fait.
Résolution des deltas: 100% (10/10), fait.
brahim@Training:/tmp$
brahim@Training:/tmp$
brahim@Training:/tmp$
brahim@Training:/tmp$ cd dockercoins-monitoring/
brahim@Training:/tmp/dockercoins-monitoring$ tree

    docker-compose.yml

   hasher

    Dockerfile

      hasher.rb
   Lab10 prometheus.pdf
    prometheus.yml
    rng
        Dockerfile
       rng.py
    webui
        files
          - d3.min.js

    index.html

           jquery-1.11.3.min.js
           - jquery.js
           - rickshaw.min.css
          rickshaw.min.js
       webui.js
    worker

    Dockerfile

      worker.py
5 directories, 16 files
brahim@Training:/tmp/dockercoins-monitoring$
```

2. Describe the dockercompose.yml file.

En plus des services de l'application (worker, webui, rng, hasher, redis), il y a 3 autres services :

- prometheus : Collecter les métriques
- cAdvisor : Exporter les métriques des conteneurs (node exporter)
- Grafana: Dashboarding
- What cadvisor service do?

Collecter et exporter les métriques de tous les conteneurs de l'hôte

Deploy application

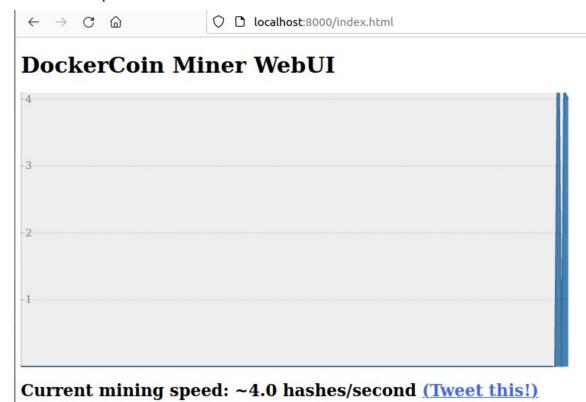

3. Using docker-compose create and start services

docker-compose up -d -build

```
brahim@Training:/tmp/dockercoins-monitoring$ docker-compose ps
            Name
                                            Command
                                                                          State
                                                                                                           Ports

                                                                  Up
                                 /run.sh
                                                                                          0.0.0:3000->3000/tcp,:::3000->3000/tcp
prometheus /bin/prometheus --config.f ...
redis docker-entrypoint.sh redis ...
brahim@Training:/tmp/dockercoins-monitoring$
                                                                  Up
                                                                                          0.0.0.0:9090->9090/tcp,:::9090->9090/tcp
                                                                                          6379/tcp
                                                                  Up
```

Test the dockercoins application using web browser

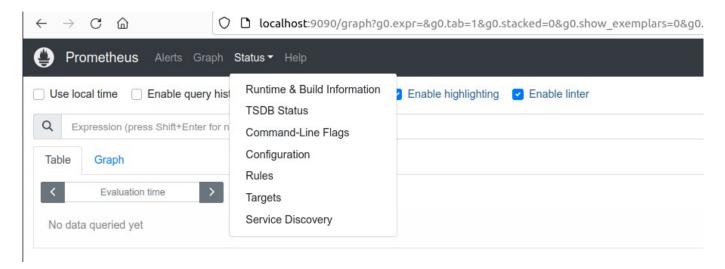

http://192.168.205.100:8000

Configuring prometheus

- 4. Open prometheus dashboard (via container and localhost)
 - What is the URL?

http://192.168.205.100:9090

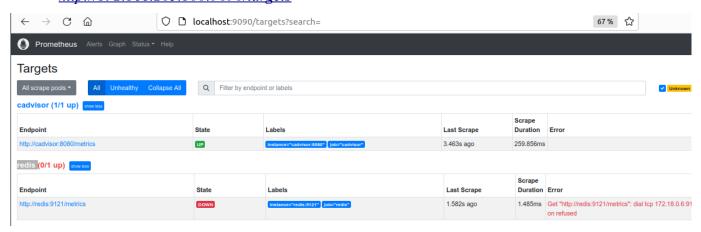

By default, what container is monitored by prometheus?

Prometheus container

• What is the path of prometheus configuration file ? /etc/prometheus/prometheus.yml

5. Display targets on prometheus dashboard.

http://192.168.205.100:9090/targets

- What metrics are collected?
 cadvisor collecte les métriques de l'OS (node exporter)
- Is redis metrics collected? If no, add job to prometheus to do that.
 Non, Installer et lancer redis_exporter sous le conteneur redis:
 wget https://raw.githubusercontent.com/brahimhamdi/redis_exporter/master/redis_exporter
 chmod +x redis exporter

./redis exporter &

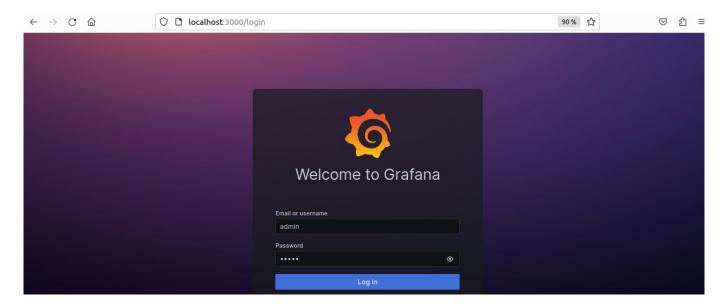

```
brahim@Training:/tmp/dockercoins-monitoring$ docker-compose exec redis bash
root@a6817dbofd5e:/data# wget https://raw.githubusercontent.com/brahimhamdi/redis_exporter/master/redis_exporter
--2023-06-20 13:03:29-- https://raw.githubusercontent.com/brahimhamdi/redis_exporter/master/redis_exporter
